

Manganese	-	0.35%
Carbon	-	0.25 %

Silicon is not the constituent element of stainless steel, while few quantities of nickel is also added as a constituent element in stainless steel.

10. In the method of electroplating on a vessel with zinc

- (a) The vessel is made to be the negative pole.
- (b) Pure zinc is made to the positive pole.
- (c) The vessel is made negative pole and pure zinc as positive pole.
- (d) The pot is made the positive pole and zinc the negative pole.

46th B.P.S.C. (Pre) 2004

Ans. (c)

In the process of electroplating zinc on a vessel, zinc loses two electrons and becomes a cation and the vessel becomes negative by losing one electron, resulting in zinc as positive pole and pot as negative pole.

11. The cans in which food is packed are coated with tin and not zinc because

- (a) tin is more reactive than zinc
- (b) zinc is more reactive than tin
- (c) zinc is costlier than tin
- (d) More than one of the above
- (e) None of the above

B.P.S.C. School Teacher (Class 11-12) 15-12-2023

Ans. (b)

As zinc is more reactive than the tin, hence to prevent food from poisoning cans in which food is packed are coated with tin and not with zinc.

12. Zinc Oxide is normally used in the manufacture of

- (a) Paints
- (b) Explosives
- (c) Solvents
- (d) More than one of the above
- (e) None of the above

BPSC (Tre-3) {Class 9-10}–2024

Ans. (a)

Zinc Oxide (ZnO) is an organic compound used in a number of manufacturing processes, it can be found in rubbers, plastics, ceramics, glass, cement, lubricants, paints, ointment, fire retardants and first aid tapes.

It usually appears as a white powder, nearly insoluble in water.

ZnO is present in the Earth's crust as a mineral zincite, however, most ZnO used commercially is produced synthetically.

NON-METALS

A. Carbon and its Various Forms

1. Which of the following does not consist carbon?

- (a) Diamond
- (b) Graphite
- (c) Coal
- (d) None of these

42nd B.P.S.C. (Pre) 1997

Ans. (d)

Diamond is an additional form (allotrope) of carbon. Its relative density is 3.5 g/cm³. Graphite is a slaty-black coloured smooth and brightly organic matter of relative density 2.25 g/cm³, which is also an allotrope of carbon, while coal is a solid carbon containing organic matter used as fuel. Thus, all of the three consist carbon.

2. Dry ice is –

- (a) Solid water
- (b) Mountain ice
- (c) Solid CO₂
- (d) Solid carbon mono oxide

46th B.P.S.C. (Pre) 2004

44th B.P.S.C. (Pre) 2000

43rd B.P.S.C. (Pre) 1999

42nd B.P.S.C. (Pre) 1998

Ans. (c)

Dry ice sometimes referred to as solid CO₂ or dry snow is the solid (frozen) form of carbon dioxide.

3. Which of the following is known as dry ice?

- (a) Dehydrated ice
- (b) Natural snow falling on the mountains
- (c) Solid carbon dioxide
- (d) Solid carbon monoxide

44th B.P.S.C. (Pre) 2000-01

Ans. (c)

See the explanation of the above question.

4. The gas, which comes out on opening a soda water bottle, is :

- (a) Carbon dioxide
- (b) Hydrogen
- (c) Nitrogen
- (d) Sulfur dioxide
- (e) None of the above/More than one of the above

63rd B.P.S.C. (Pre) 2017

Ans. (a)

Soda water or carbonated water is water that has been infused with carbon dioxide gas under pressure. The gas, which comes out on opening a soda water bottle, is carbon dioxide that produces a bubbly drink.
