

Antipyretics cause the hypothalamus to override a prostaglandin-induced increase in temperature. The body then works to lower the temperature, resulting in a reduction in fever. Aspirin is antipyretic and analgesic.

8. The antibiotic among the following is :

- (a) Penicillin (b) Aspirin
- (c) Paracetamol (d) Sulfadiazine
- (e) None of the above/More than one of the above

63rd B.P.S.C. (Pre) 2017

Ans. (e)

Among the given options, penicillin and sulfadiazine both are antibiotics. Aspirin and paracetamol are analgesic and antipyretic medicines.

9. Which among the following is not an antibiotic?

- (a) Erythromycin (b) Oxytocin
- (c) Penicillin (d) Tetracycline
- (e) None of the above/More than one of the above

B.P.S.C. CDPO 2018

Ans. (b)

Oxytocin is a hormone normally produced in the hypothalamus and released by the posterior pituitary. In human, it plays role in behaviour that include social bonding, reproduction, childbirth and the period after childbirth.

10. An example of antibiotic medicine :

- (a) Aspirin (b) Paracetamol
- (c) Chloroquine (d) Penicillin
- (e) None of the above/More than one of the above

66th B.P.S.C. (Pre) (Re. Exam) 2020

Ans. (d)

Among the given options, penicillin is an antibiotic medicine. Aspirin and paracetamol are analgesic and antipyretic medicines while chloroquine belongs to antimalarial medicines.

11. The 10% law of energy flow in ecosystem was proposed by

- (a) Lindeman (b) Hückel
- (c) Elton (d) More than one of the above
- (e) None of the above

B.P.S.C. PRT 2023 Shift II

Ans. (a)

The 10% law of energy flow in ecosystem was proposed by Lindeman. This states that only 10% of energy is passed to the next consumer in the unidirectional manner and 90% is lost to the environment.

12. How much energy is consumed from one trophic level to another trophic level?

- (a) 5% (b) 10%
- (c) 15% (d) More than one of the above
- (e) None of the above

B.P.S.C. PRT 2023 Shift II

Ans. (b)

Only about 10% of the energy is consumed from one trophic level to another trophic level. This is known as "the 10 percent rule" and it limits the number of trophic levels an ecosystem can support.

13. Food cans are coated with tin and not with zinc because

- (a) zinc is costlier than tin
- (b) zinc has a higher melting point than tin
- (c) zinc is more reactive than tin
- (d) More than one of the above
- (e) None of the above

B.P.S.C. PRT 2023 Shift I

Ans. (c)

Food cans are coated with tin and not with zinc because zinc is more reactive than tin.

Detergent and Soap

1. Which one of the following is used in the manufacture of soaps?

- (a) Vegetable oil (b) Mobil oil
- (c) Kerosene oil (d) Cutting oil

44th B.P.S.C. (Pre) 2000

Ans. (a)

Soap is a combination of animal fat or plant oil and caustic soda. When dissolved in water, it breaks dirt away from the surface. The modern soap makers use the fat that has been processed into fatty acids. This eliminates many impurities and it produces water as a by-product instead of glycerin. Many vegetable fats including olive oil, palm kernel oil and coconut oil are also used in soap making.

2. Soap, removes grease by –

- (a) Coagulation (b) Adsorption
- (c) Emulsification (d) Osmosis
- (e) None of the above/More than one of the above

60th to 62nd B.P.S.C. (Pre) 2016

Ans. (c)
