

7. Plants which flower only once in life are

- (a) pericarpic (b) polycarpic
(c) monocarpic (d) cleistocarpic

B.P.S.C. Assistant Mains (GK) Paper II 2023

Ans. (c)

The term monocarpic defines those plants that flower a single time, set seeds for reproduction, and then die. There are annuals, biennials, and perennials in this category of plant material.

8. The most important part of the plant in term of its life cycle is–

- (a) Flower (b) Leaf
(c) Stem (d) Root

47th B.P.S.C. (Pre) 2003

Ans. (a)

The flower is the most important part of the plant in term of its life cycle. The biological function of a flower is to mediate the union of male and female gametes in order to produce seeds. The process begins with pollination followed by fertilization and continues with the formation and dispersal of the seed.

9. A plant is obtained like a mother plant -

- (a) from seeds (b) cutting off the stem
(c) from both of these (d) none of the above

46th B.P.S.C. (Pre) 2004

Ans. (c)

Like the mother plant, the plant comes from seed and cutting off the stem.

I. Viral Diseases

1. Name a clinical trial in which blood is transfused from recovered COVID-19 patient to a corona virus patient who is in critical condition.

- (a) Plasma therapy (b) Remdesivir
(c) Solidarity (d) None of the above

BPSC Agriculture Department-2024

Ans. (a)

Convalescent plasma is a transfusion of blood plasma from someone who has recovered from COVID-19. Current evidence shows that convalescent plasma does not improve survival or reduce the need for mechanical ventilation, while it has significant costs.

2. How do COVID vaccines stimulate an immune response?

- (a) By introducing live attenuated SARS-CoV-2 virus
(b) By introducing a real SARS-CoV-2 virus
(c) By introducing a harmless piece of SARS-CoV-2 virus
(d) By introducing antibodies against SARS-CoV-2 virus

69th B.P.S.C. (Pre) 2023

Ans. (a)

'Covaxin' falls under this category i.e. Inactivated or attenuated live virus. 'Covishield' apparently fall under this category but it is a viral vector vaccine that uses an adenovirus found in Chimpanzees, ChADOX1 and not SARS-CoV-2 virus. So correct option is (a).

3. Which of the following does not have any enzyme in its cells?

- (a) Lichen (b) Virus
(c) Bacteria (d) Algae
(e) None of the above/More than one of the above

65th B.P.S.C. (Pre) 2019

Ans. (e)

Lichen, bacteria and algae, all these have enzymes in their cells. The virus generally relies on the enzymes already present in the host cell or make enzymes that it needs using its own genome inside the host cell. Some viruses have no enzymes at all inside the viral particle itself. In other viruses, a small number of enzymes can be found inside the viral particle itself and also on the surface of some viruses. Enzymes found in some viral particles are reverse transcriptase, RNA-dependent RNA polymerase, an integrase, neuraminidase etc. Thus, the option (e) is the right answer.

4. The disease caused by HIV is –

- (a) Tuberculosis (b) Dysentery
(c) Cancer (d) AIDS

41st B.P.S.C. (Pre) 1996

Ans. (d)

AIDS (Acquired immune deficiency syndrome or acquired immunodeficiency syndrome) is a syndrome caused by a virus called HIV (Human Immunodeficiency Virus) which destroys the disease resistance power of the human body. People infected with HIV may have the following symptoms :

- Rapid weight loss
- Recurring fever or profuse night sweats
- Extreme and unexplained tiredness
- Prolonged swelling of the lymph glands in the armpits, groin, or neck
- Diarrhoea that lasts for more than a week
- Sores of the mouth, anus, or genitals
- Pneumonia
- Red, brown, pink, or purplish blotches on or under the skin or inside the mouth, nose, or eyelids
- Memory loss, depression, and other neurologic disorders.

5. AIDS is caused by :

- (a) Helminth (b) Bacteria
(c) Fungus (d) Virus
(e) None of the above/More than one of the above

64th B.P.S.C. (Pre) 2018

65th B.P.S.C. (Pre) 2019

Ans. (d)

See the explanation of the above question.
