

12. The most common carrier of communicable diseases is
 (a) ant (b) housefly
 (c) dragonfly (d) spider
 (e) None of the above / More than one of the above

B.P.S.C. CDPO 2022

Ans. (b)

Houseflies (*Musca domestica*) have long been regarded as potential carriers of microorganisms. It is one of the most common carrier of communicable diseases.

Genetic Engineering and Biotechnology

1. Who synthesized the DNA in vitro?
 (a) Arthur Kornberg (b) Robert Hooke
 (c) Edward Jenner (d) Joseph Lister
 56th to 59th B.P.S.C. (Pre) 2015

Ans. (a)

Arthur Kornberg synthesized the DNA in vitro. He won the 1959 Nobel prize in Physiology or Medicine for his discovery of the mechanisms in the biological synthesis of DNA.

2. 'AVAHAN' the Indian segment of 'Bill and Melinda Gates Foundation', is engaged in the prevention of-
 (a) Dengue (b) Polio
 (c) HIV/AIDS (d) Filariasis
 53rd to 55th B.P.S.C. (Pre) 2011

Ans. (c)

AVAHAN is an initiative sponsored by the Bill & Melinda Gates Foundation to reduce the spread of HIV in India. It began in 2003.

3. Which date is known as 'Diabetes Day'?
 (a) 14th February (b) 14th May
 (c) 14th September (d) 14th November
 53rd to 55th B.P.S.C. (Pre) 2011

Ans. (d)

World Diabetes Day (WDD) is celebrated every year on November 14.

4. To diagnose the medical conditions, MRI technique is used. Which is not used in MRI?
 (a) Magnetic field (b) X-ray
 (c) Radio wave (d) Gamma ray
 (e) None of the above/More than one of the above

66th B.P.S.C. (Pre) (Re. Exam) 2020

Ans. (e)

Magnetic Resonance Imaging (MRI) is a medical imaging technique used in radiology to form pictures of the anatomy and the physiological processes of the body. MRI scanners use strong magnetic fields, magnetic field gradients, and radio waves to generate images of the organs in the body. MRI technique does not involve use of ionizing radiation (Gamma rays, X-rays and the higher ultraviolet part of the electromagnetic spectrum), which distinguishes it from CT and PET scans.

5. The infective stage of *Entamoeba histolytica* is
 (a) trophic form (b) mature cyst
 (c) sporozoite (d) minuta form
 (e) None of the above / More than one of the above

B.P.S.C. Auditor 2021

Ans. (b)

Entamoeba histolytica is an unicellular eukaryotic parasite. *Entamoeba histolytica* causes dysentery by invading the mucosa and submucosa layers of the large intestine in human beings. The infective stage of *Entamoeba histolytica* is mature cyst stage.

Miscellaneous

1. How do vector vaccines work to provide immunity?
 (a) By introducing a weakened or inactivated virus into the body
 (b) By directly attacking and destroying pathogens in the body
 (c) By placing the virus in a modified version of a different virus
 (d) By entering directly into the cells and enabling them to create spike proteins

69th B.P.S.C. (Pre) 2023

Ans. (c)

Vector Vaccines work to provide immunity by placing the virus in a modified version of a different virus. Vector vaccine refers to the introduction of viral gene into a harmless virus.

2. Match List-I with List-II :

List—I (Cloth)	List—II (Origin)
A. Linen	1. Coconut plant
B. Coir	2. Flax plant
C. Mohair	3. Feathers of duck and geese
D. Down	4. Angora goat

 Select the correct answer using the codes given below.

	A	B	C	D
(a)	1	3	2	4
(b)	4	3	1	2
(c)	2	1	4	3
(d)	4	1	3	2

69th B.P.S.C. (Pre) 2023

Ans. (c)

The correct matching is as follows—

List—I (Cloth)	List—II (Origin)
A. Linen	2. Flax plant
B. Coir	1. Coconut plant
C. Mohair	4. Angora goat
D. Down	3. Feathers of duck and geese

3. Which of the following is related to genetic engineering?
 (a) Plastid (b) Plasmid
 (c) Heterosis (d) Mutation
 (e) None of the above / More than one of the above

B.P.S.C. Auditor 2021

Ans. (b)

A Plasmid is a small circular DNA molecule found in bacteria and some other microscopic organisms. Plasmids are physically separate from chromosomal DNA and replicate independently. So plasmid is related to genetic engineering.
Note : Plastids are cell organelles that are found in green plants and algae. Plastids are responsible for containing Photosynthetic pigments, other coloring pigment, starch, protein etc.

4. **Coliforms are**
 (a) bacteria present in the digestive tract of animals
 (b) bacteria present in hot springs
 (c) bacteria present in frigid environment
 (d) More than one of the above
 (e) None of the above

B.P.S.C. PRT 2023 Shift I

Ans. (a)

Coliforms are Bacteria present in the digestive tract of animals. Coliform bacteria, any of various rod-shaped microorganisms that occur in the intestinal tracts of animals, including humans, and that are widespread in the environment. Coliform bacteria serve as critical indicators of water quality.

5. **Which one of the following is not a gaseous biogeochemical cycle in ecosystem?**
 (a) Phosphorus cycle (b) Oxygen cycle
 (c) Nitrogen cycle (d) More than one of the above
 (e) None of the above

B.P.S.C. PRT 2023 Shift I

Ans. (a)

Phosphorus cycle is not a gaseous biogeochemical cycle in ecosystem. The Phosphorus cycle is the biogeochemical cycle that describes the transformation and translocation of phosphorus in soil, water, and living and dead organic material.

6. **Which of the following organisms convert inorganic substances into organic compounds using sunlight in the presence of chlorophyll?**
 (a) Autotrophs (b) Certain bacteria
 (c) Animals (d) More than one of the above
 (e) None of the above

B.P.S.C. PRT 2023 Shift I

Ans. (d)

Thus the organisms which can manufacture organic food materials from simple inorganic substances are called autotrophs. Examples are plants, algae, bacteria etc.

7. **The process of progressive chemical accumulation of non-degradable chemicals at each trophic level is known as**
 (a) biological magnification
 (b) morphological magnification
 (c) thermogenic magnification
 (d) More than one of the above
 (e) None of the above

B.P.S.C. PRT 2023 Shift I

Ans. (a)

Biomagnification is, increase in the concentration of a toxin, such as a pesticide, in the tissues of resistant species at successively at each trophic levels in a food chain.

8. **The increase in concentration of toxic substances in successive trophic level is referred to as**

- (a) eutrophication (b) biomagnification
 (c) bioaccumulation (d) More than one of the above
 (e) None of the above

B.P.S.C. PRT 2023 Shift II

Ans. (b)

The increase in concentration of toxic substances in successive trophic level is referred to as biomagnification. This happens because a toxic substance accumulated by an organism cannot be metabolised or excreted and is thus passed on the next higher trophic level.

9. **Which of the following represents non-ohmic resistance?**

- (a) Copper (b) Nichrome
 (c) Torch Bulb (d) More than one of the above
 (e) None of the above

BPSC (Tre-3) {Class 6-8}–2024

Ans. (c)

The device that does not follow Ohm's law is known as a non-ohmic device (i.e. the resistance is different for different currents passing through it); Examples of non-ohmic devices are thermistor, crystal rectifier, vacuum tube, diode etc. Mercury, copper and nichrome obey ohm's law i.e. $V=IR$, thus are called as ohmic resistance whereas bulb of a torch do not obey ohm's law and hence it is a non-ohmic resistance.

10. **Female Anopheles can be distinguished from female Culex because it sits**

- (a) at right angle to the surface of substratum
 (b) at an angle with substratum
 (c) parallel to the surface of substratum
 (d) More than one of the above
 (e) None of the above

68th B.P.S.C. (Pre) 2022

Ans. (b)

Female Anopheles can be distinguished from female culex because it sits at an angle with substratum. Anopheles mosquito is known as the malaria mosquito species because it is considered as the primary vector of the disease. The body of the adult Anopheles mosquito is dark brown to black in color and has three sections which are the Head, Thorax and Abdomen.

11. **In eye donation, which part of the donor's eye is transplanted?**

- (a) Lens (b) Cornea
 (c) Whole eye (d) More than one of the above
 (e) None of the above

B.P.S.C. PRT 2023 Shift II

Ans. (b)

In eye donation cornea of the donor's eye is transplanted. The cornea is the transparent front part of the eye that covers the iris, pupil and anterior chamber.

12. **Which of the following represent the food chain in a forest?**

- (a) Plants, deer, lion (b) Plants, frog, snake
 (c) Plants, weeds, fish (d) More than one of the above
 (e) None of the above

B.P.S.C. PRT 2023 Shift I

Ans. (a)

In forest food chain plants and trees serve as producers. Herbivores serve the second level in this ecosystem. Here herbivores like squirrels, rabbits and deers occupy second level. Representation is – Plants, Deer, Lion.

13. Which of the following is not a correct match?

- (a) Petiole: Attaches leaf to stem
- (b) Thick, hard stem with branching near base: Tree
- (c) Weak stem which cannot stand upright: Creeper
- (d) More than one of the above
- (e) None of the above

68th B.P.S.C. (Pre) 2022

Ans. (b)

Thick, hard stems with branching near base are called shrubs. Creepers are a type of plants that creep on the ground. They have long, thin stems that can neither stand erect nor support all their weight.
example–watermelon.
Petiole is a stalk that attaches a leaf to the plant stem.

14. The nature of vascular bundle in dicot stem is generally

- (a) radial
- (b) concentric
- (c) collateral
- (d) eccentric
- (e) None of the above / More than one of the above

B.P.S.C. Auditor 2021

Ans. (c)

The Nature of Vascular bundle in dicot stem is generally collateral. In dicots, the vascular bundle consists essentially of four layers. Dicots have vascular cambium, vascular bundles in the stem of dicots (mostly) are conjoint, collateral and open.

15. Pine, Fir, Spruce, Cedar, Larch and Cypress are the famous timber-yielding plants of which several also occur widely in the hilly regions of India. All these belong to –

- (a) angiosperm
- (b) gymnosperm
- (c) monocotyledons
- (d) dicotyledons
- (e) None of the above/More than one of the above

67th B.P.S.C. (Re-Exam) (Pre) 2021

Ans. (b)

Pine, fir, spruce, cedar, larch and cypress are the famous timber producing plants. These are coniferous trees found in mountain forest. All of these are called gymnosperm.

16. Who was the first scientist/doctor, who attempted vaccination?

- (a) Joseph Lister
- (b) Robert Koch
- (c) Elie Metchnikoff
- (d) Edward Jenner
- (e) None of the above/More than one of the above

67th B.P.S.C. (Re-Exam) (Pre) 2021

Ans. (d)

Edward Jenner had introduced vaccination for the first time in the year 1796.

17. 'Chlorosis' takes place when plants are grown in

- (a) dark
- (b) shade
- (c) light
- (d) Fe-less medium
- (e) None of the above / More than one of the above

B.P.S.C. Auditor 2021

Ans. (d)

Chlorosis is a yellowing of normally green leaves due to a lack of chlorophyll. However, there are many more possible causes of chlorosis than just viruses or nutrient problems. But chlorosis can take place when plants are grown in Fe-less medium.

18. In coconut, the dispersal of fruit is due to

- (a) mesocarp
- (b) epicarp
- (c) endocarp
- (d) curved hooks
- (e) None of the above / More than one of the above

B.P.S.C. Auditor 2021

Ans. (a)

In the coconut, the dispersal of fruit is due to mesocarp. The fibrous mesocarp helps it to float in water.

19. World's first camel hospital is located in which city?

- (a) Tehran
- (b) Jaipur
- (c) Bikaner
- (d) Dubai
- (e) None of the above/More than one of the above

65th B.P.S.C. (Pre) 2019

Ans. (d)

World's first camel hospital is located in Dubai, United Arab Emirates. Its name is 'Dubai Camel Hospital', that exclusively treats camels.

20. A clinical death takes place when

- (a) there is no pulse
- (b) there is no heartbeat
- (c) pupils are fixed and dilated and there is no reaction to light
- (d) all the above three conditions are present together
- (e) None of the above/More than one of the above

B.P.S.C. CDPO 2018

Ans. (d)

Clinical death is a phenomenon in which the pulse rate and beating of heart stop their function. In such a type of death, various body cells and organs remain to live for a few hours after the death.

21. Which one of the following can be used for biological control of mosquitoes?

- (a) Oil
- (b) Ointment
- (c) DDT
- (d) Gambusia
- (e) None of the above/More than one of the above

B.P.S.C. CDPO 2018

Ans. (d)

Gambusia can be used for biological control of mosquitoes. Gambusia is a fish species that feeds on larvae of mosquitoes.

22. How do the members of honey-bee hive recognise each other?

- (a) By smell
- (b) By eyes
- (c) By dancing
- (d) By touching

39th B.P.S.C. (Pre) 1994

Ans. (a)

The members of honey-bee hive recognise each other by smell. The honey bee hive has a special odour which helps each other members in identification. Bees communicate the location of food sources to each other through the complex circle and waggle dances.

23. The first human heart transplant was performed in–

- (a) America
- (b) England

(c) South Africa

(d) France

56th to 59th B.P.S.C. (Pre) 2015

Ans. (c)

The first heart transplant was performed by Dr. Christian Bernard who was a famous surgeon of South Africa. Barnard performed the first transplant on Louis Washkansky on December 3, 1967 at the Groote Schuur Hospital in Cape Town, South Africa.

24. In which faculty is scientist Evan Pavlov known for?

(a) Physics

(b) Mathematics

(c) Chemistry

(d) Experimental Psychology

38th B.P.S.C. (Pre) 1992

Ans. (d)

Ivan Pavlov was a Russian Psychologist whose research on the psychology of digestion led to the development of the first experimental model of learning classical conditioning. Most of his research was gathered studying salivating dogs. He was awarded the Nobel Prize in Physiology or Medicine in 1904.

25. The largest flower in the world is-

(a) Lotus

(b) Sunflower

(c) Rafflesia

(d) Glory Lily

39th B.P.S.C. (Pre) 1994

Ans. (c)

Rafflesia plant with no leaves, no roots, no stem is the biggest flower in the world. It sounds like the stuff of comic books or science fiction. 'It is perhaps the largest and most magnificent flower in the world' was how Sir Stamford Raffles described his discovery in 1818 of Rafflesia Arnoldii, modestly named after himself and his companion, surgeon-naturalist Dr. James Arnold.

26. Who discovered bacteria?

(a) Fleming

(b) Lamble

(c) Temin

(d) Leeuwenhoek

56th to 59th B.P.S.C. (Pre) 2015

Ans. (d)

Antony Van Leeuwenhoek is regarded as the father of microbiology. He is known for the discovery of bacteria. He was born on October 24, 1632 in Delft, Netherlands.

27. Which scientist has propounded the 'erosional cycle'?

(a) Penck

(b) Davis

(c) Hutton

(d) Dutton

44th B.P.S.C. (Pre) 2000

Ans. (b)

The cycle of erosion was a model for stream erosion and landscape development proposed by William Morris Davis. He gave the concept of the geographical cycle of erosion which recognises the possibility of obliteration of relief or plantation during the life history of a landscape, by the process of erosion.

28. The age of most ancient mountain group is assessed by -

(a) Potassium-organ process

(b) C₁₄ process

(c) Ra-Siprocess

(d) Uranium-Lead process

39th B.P.S.C. (Pre) 1994

Ans. (d)

Uranium-lead (U-Pb) process is one of the oldest and most refined methods used to determine the age of ancient mountain rocks that formed from about 1 million years ago or above. Radiocarbon dating (also referred to as carbon dating or carbon-14 dating) is a method of determining the age of an object containing organic material (fossils of dead animals and plants) by using the properties of radiocarbon C-14, a radioactive isotope of carbon.

29. Angora wool is extracted from :

(a) Rabbit

(b) Fox

(c) Goat

(d) Sheep

(e) None of the above/More than one of the above

66th B.P.S.C. (Pre) (Re. Exam) 2020

Ans. (a)

'Angora wool' (Angora hair or Angora fibre) is extracted from the Angora rabbit. It refers to the downy coat produced by the Angora rabbit. It is distinct from 'mohair', which comes from Angora goat.

30. Development of the natural systems is described as :

(a) Function of the systems

(b) Evolution of the systems

(c) Self-sustained process of the systems

(d) None of the above

53rd to 55th B.P.S.C. (Pre) 2011

Ans. (c)

The natural system regulates natural functions. So, the development of the natural system is defined as self-sustained process of the system.

31. Insectivorous plants grow in the soil deficient in -

(a) Water

(b) Magnesium

(c) Nitrogen

(d) Calcium

(e) None of the above / More than one of the above

67th B.P.S.C. (Pre) 2021

Ans. (c)

Insectivorous plants grow in soils that lack nitrogen. They meet their nitrogen requirement by feeding on insects.

32. When we eat the meat of goat or sheep, then we are -

(a) Primary consumers

(b) Secondary consumer

(c) Tertiary consumer

(d) None of the above

40th B.P.S.C. (Pre) 1995

Ans. (b)

Humans	-	omnivorous
Carnivorous	-	secondary consumer
Vegetarian	-	primary consumer
Plants	-	primary producer

33. Age of a tree can be calculated by

(a) number of branch counts

(b) measurement of girth above 1 m from ground

(c) measurement of height

(d) More than one of the above

(e) None of the above

B.P.S.C. School Teacher (Class 9-10) 07-12-2023

Ans. (b)

The age of a tree can be calculated by simply measuring the trunk of the tree (girth) at about 1m from the ground. As roughly a tree will increase its girth by about 2.5 cm in a year.

PREFACE

There has been a trend in the PCS examination held by every State to base questions seeking information about that particular state. For state-based information, it is very important to access its proper source; otherwise there will be a possibility of getting questions wrong. Here we have taken the official sources of the Central and State Governments as the source of our information with regard to the questions asked in BPSC exams over the years, which we believe will prove to be valuable from the examination point of view. In case of any error found in the presented material, the readers are requested to inform us. We will provide readers with clarification.

INDEX

Chapter	Page No.
1. Indian History ● Ancient History ● Medieval History ● Modern History	3-129
2. Indian Polity and Governance	130-179
3. General Geography ● Indian Geography ● World Geography	180-249
4. Environment & Ecology	250-260
5. Economic and Social Development	261-331
6. General Science ● Physics ● Chemistry ● Biology	332-426
7. Current Events ● National Events ● International Events	427-487
