

General Geography

INDIAN GEOGRAPHY

1. GENERAL INTRODUCTION

i. Area

1. Area of India is 2.4% of the total area of the world but its–

- (a) population is 16% of world population
- (b) population is 17% of world population
- (c) population is 18% of world population
- (d) population is 28% of world population

39th B.P.S.C. (Pre) 1994

Ans. (b)

As per the Census 2001, the area of India is 3287263 square km. which is approximately 2.4% of the total land area of the world, whereas its total population is 16.7% (17.5% as per Census 2011) of the total population of the world. Hence option (b) is the closest answer.

2. The share of mountains in total land area of India is

- (a) 30 percent
- (b) 27 percent
- (c) 40 percent
- (d) More than one of the above
- (e) None of the above

B.P.S.C. Headmaster 07-12-2023

Ans. (a)

Mountains cover about 30% of land in India. The mountains are a source of many important river systems, like the Ganga and Yamuna, that originate in the Himalayas.

3. India's territorial limit extends towards the sea up to how many nautical miles/km from the coast?

- (a) 10 nautical miles (about 19-9 km)
- (b) 16 nautical miles (about 25.9 km)
- (c) 12 nautical miles (about 21-9 km)
- (d) More than one of the above
- (e) None of the above

68th B.P.S.C. (Pre) 2022

Ans. (c)

The United Nations Convention on the Law of the Sea (UNCLOS), 1982 is an international agreement that establishes the legal framework of marine and maritime activities. This convention defines territorial water or territorial sea on the law of the sea as a belt of coastal water extending at most 12 nautical miles or 22.2 km from the baseline of a coastal state. India is a state party to the UNCLOS. The coastal states have sovereignty and jurisdiction over the territorial sea.

ii. Latitudinal & Longitudinal

Expansion

1. Which of the following falls under 'Frigid Zone'?

- (a) Area lying between $66\frac{1}{2}^{\circ}$ N latitude and North Pole
- (b) Area lying between $23\frac{1}{2}^{\circ}$ and $66\frac{1}{2}^{\circ}$ latitudes in both Hemispheres
- (c) Area lying between Antarctic Circle and South Pole
- (d) More than one of the above
- (e) None of the above

B.P.S.C. PRT 2023 Shift II

Ans. (d)

Frigid zones are the coolest regions of Earth and are generally covered in ice and snow. It receives slanting rays of the sun as this region lies farthest from the equator. It is the region between the Antarctic Circle and south pole.

2. The expansion of India is between –

- (a) $37^{\circ} 17' 53''$ North and $8^{\circ} 6' 28''$ South
- (b) $37^{\circ} 17' 53''$ North and $8^{\circ} 4' 28''$ South
- (c) $37^{\circ} 17' 53''$ North and $8^{\circ} 28''$ North
- (d) None of the above

39th B.P.S.C. (Pre) 1994

Ans. (d)

The area of India extends between $8^{\circ}4'$ North to $37^{\circ}6'$ North latitudes and $68^{\circ} 7'$ East to $97^{\circ} 25'$ East longitudes. The Tropic of Cancer passes almost through the middle of India. Thus it is clear that option (d) none of the above is correct.
