

7. Which of the following is not correctly matched ?

Dams	Rivers
(a) Grand Coulee	- Columbia
(b) Hoover	- Tennessee
(c) Nurek	- Vakhsh
(d) Cahora (Cobborra)	- Zambezi
Bassa	

U.P.P.C.S.(Pre) (Re-Exam) 2015

Ans. (b)

Hoover dam also known as Boulder dam is a concrete arch- gravity dam in the Black Canyon of Colorado River on the border of U.S. states of Nevada and Arizona. Thus, option (b) is not correctly matched.

The Coral Reefs

*Coral reefs are called the rainforest of the ocean. *Coral reefs are found in abundance in the tropical latitudes i.e. between Tropic of Cancer and the Tropic of Capricorn (generally extending between 30°N to 30°S). They occur in shallow tropical areas where the seawater is clean, clear and warm.

* Coral reefs, constitute only between 0.08 to 0.16% of the ocean floor, however, they provide for 25% of the oceanic flora and fauna. *Coral is actually a living organism.

*When the temperature rises the corals start removing the zooxanthellae from their bodies. As a result, the corals turn white and this phenomenon is called coral bleaching.

***Great Barrier Reef** is the largest coral reef in the world. It is located in the Pacific Ocean, North-East of the Australian state of Queensland. The Great Barrier Reef is home to approximately 400 types of corals, 1500 types of fish and 4000 types of Mollusks.

***Fringing reef** are comparatively narrower. This reef system lies close to the shore hence, wherever the river meets the ocean the fringing reef breaks. Fringing reefs are found in South Florida, Malaysia, etc.

*An **atoll** is a ring shaped coral reef that sometimes looks like a horseshoe. Atolls are found in Antilles sea, Red sea, Indonesia Sea, China Sea and Australian Sea. **Funafuti Atoll** is a famous atoll.

1. Generally, where are coral reefs found?

- (a) In temperate climate above 18°C
- (b) Between Tropic of Cancer and Tropic of Capricorn coastal areas

- (c) On both east and west coasts of continents and islands only
- (d) On colder sea coasts

R.A.S./R.T.S.(Pre) 2008

Ans. (b)

Most of the world's coral reefs are found in eastern and western coastal areas between the Tropic of Cancer and Tropic of Capricorn (generally extending between 30°N to 30°S). Australia's Great Barrier Reef is the world's largest coral reef. Coral reefs cover 0.08% to 0.16% of our oceans but they contain 25% of the world's marine species.

2. 'Great Barrier Reef' is—

- (a) A coral reef near Australia
- (b) A watershed in Rajasthan
- (c) Wall of China
- (d) A range of the Rocky Mountains

R.A.S./R.T.S. (Pre) 1999

Ans. (a)

The Great Barrier Reef is the world's largest coral reef .The reef is located in the Pacific Ocean, off the coast of Queensland in Northeast Australia. A total 2300 km long coral reef lies between 10° south to 24° south .There are over 1,500 species of fish, about 400 species of corals, and approximately 4,000 species of molluscs.

3. With reference to the "Great Barrier Reef", which of the following statement/s is/are correct?

- 1. It is situated along the north-eastern coast of Australia.
- 2. It is more than 2500 kms in length.

Select the correct answer using the code given below:

Code :

- (a) Neither 1 nor 2
- (b) Only 1
- (c) Both 1 and 2
- (d) Only 2

U.P. R.O./A.R.O. (Pre) 2023

Ans. (b)

The Great Barrier Reef is a site of remarkable variety and beauty on the north-east coast of Australia. Notably, it contains the world's largest collection of coral reefs, with 400 types of coral, 1500 species of fish and 4,000 types of mollusks. Length of the Reef is about 2300 km mainly extending across 10° south to 24° south latitudinal range.

4. The Great Barrier Reef is located in

- (a) Pacific Ocean
- (b) Indian Ocean
