

vi. The Aluminium

Aluminium is a whitish colored metal. Bauxite is the ore of aluminium.

According to World Mineral Production 2018-22, in the year 2022, the top five leading countries in terms of aluminium (primary) production were—**China, Russia, Canada, UAE and India**. The **Cape York Peninsula** and **Weipa region of Australia**, the **Saline County of Arkansas (USA)**, the **Cola Peninsula** of the Russia are some important regions of the world where Bauxite production is being done.

1. Which of the following is different from the remaining three –

- (a) Haematite (b) Magnetite
(c) Limonite (d) Bauxite

M.P.P.C.S. (Pre) 2008

Ans. (d)

Bauxite is different from remaining three because Bauxite is an Aluminium ore, while other three i.e, Haematite, Magnetite and Limonite are Iron ores.

2. Bauxite is the ore of

- (a) Iron (b) Zinc
(c) Tin (d) Aluminium

M.P.P.C.S. (Pre) 2014

Ans. (d)

See the explanation of the above question.

3. Maximum aluminium producing country in the world is—

- (a) Germany (b) India
(c) Iron (d) U.S.A

U.P. P.C.S. (Pre) 1993

Ans. (d)

When this question was asked option (d) was correct answer. According to World Mineral Production 2018-22 in the year 2022, the largest Aluminium (primary) producers in the world are—

Country	Production
China	- 40214000 Metric Tonnes
Russia	- 4014000 Metric Tonnes
Canada	- 3026236 Metric Tonnes
UAE	- 2720000 Metric Tonnes
India	- 2322270 Metric Tonnes

4. The largest producer of aluminium in the world is –

- (a) France (b) India
(c) U.S.A. (d) Italy

56th to 59th B.P.S.C. (Pre) 2015

Ans. (b)

The five largest producers of aluminium in the world (in the year 2022) are China > Russia > Canada > UAE > India.

vii. The Tin

*About 80% of the world's tin is found in placer deposits. These deposits are located in riverbeds and Valleys or on the sea floor. Maximum placer deposits are spread across South-East Asia. Most of the tin deposits in China are found in the plateau region of Yunnan.

*In Indonesia tin is produced from the **Sumatra islands** of Bangka and Belitung. In Malaysia, tin is produced from the Kinta Valley (Perak province), Kuala Lumpur, and Pahang province. In South America, tin deposits are found in the eastern Andes region, within a belt.

*According to World Mineral Production, 2018-22 as per the figures of the year 2022, the top five leading producers of tin (mine production) in the world are – **China** (67365 tonnes), **Indonesia** (57735 tonnes), **Myanmar** (40500 tonnes), **Peru** (28231 tonnes) and **Bolivia** (17613 tonnes).

1. Tin is found-

- (a) In Placer deposits (b) In Metamorphic rocks
(c) In little silica Igneous rocks (d) In all these rocks

39th B.P.S.C. (Pre) 1994

Ans. (a)

About 80% of the world's Tin is found in placer deposits. These deposits are a natural concentration of heavy minerals caused by the effect of gravity on moving particles. Placer deposits are usually situated near riverbeds and valleys or on the sea floor and are spread in South East Asia.

2. The leading producer of Tin in the world is –

- (a) Bolivia (b) Brazil
(c) Indonesia (d) Malasia

U.P.P.S.C. (GIC) 2010

Ans. (c)

According to World Mineral Production, 2018-22, largest Tin producers in the world (2022) are :

Country	Production (Tonne)
China	- 67365
Indonesia	- 57735
Myanmar	- 40500
Peru	- 28231
Bolivia	- 17613

Since China is not among the options, the correct answer would be Indonesia.

3. Malaysia, the 'Kinta Valley' is famous for:

- (a) Rubber Production (b) Tea Production
(c) Tin Production (d) Coffee Production

U.P. P.C.S. (Pre) 2020

Ans. (c)

Kinta Valley in Malaysia is famous for Tin production.
