

Codes :

- (a) Both (A) and (R) are true and (R) is correct explanation of (A).
- (b) Both (A) and (R) are true, but (R) is not correct explanation of (A).
- (c) (A) is true, but (R) is false.
- (d) (A) is false, but (R) is true.

U.P.P.C.S. (Pre) 2021

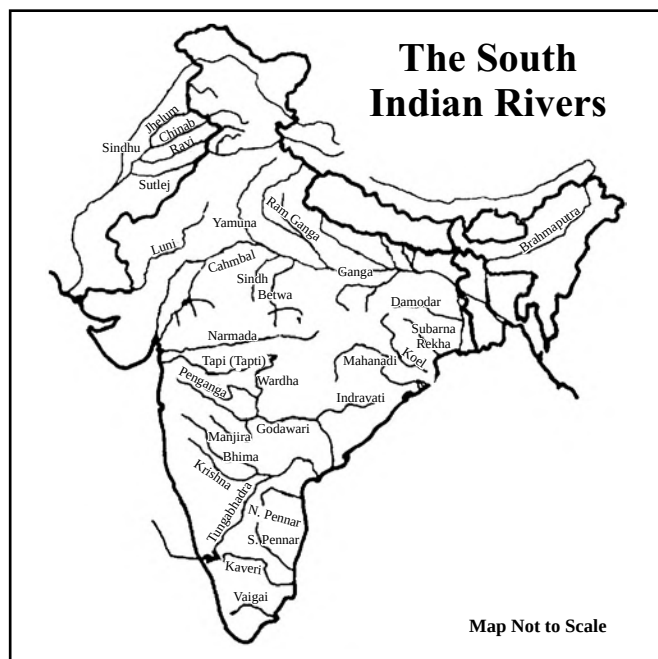

Ans. (a)

Historically, the Teesta river was a tributary of the Ganga and now it is a tributary of Brahmaputra. River capture is a natural process that is more active in the youthful stage of the valley development because the streams are actively engaged in headward erosion and valley lengthening but river capture also occurs during mature and senile stages of the valley development through the process of lateral erosion and meander intersection.

iii. The South Indian Rivers

*The main water divide in Peninsular India is formed by the Western Ghats, which run from north to south close to the western coast. Most of the major rivers of the Peninsula such as **the Mahanadi, the Godavari, the Krishna, and the Cauvery** flow eastwards and drains into the Bay of Bengal.

*These rivers form deltas at their mouths. **The Narmada, the Tapi and the Mahi** are the major rivers that flow west and creates **estuaries**. *Peninsular rivers are characterized by a **fixed course, absence of meanders** and **non-perennial** flow of water. The river Narmada and the Tapi which flow through the **rift valley** are, however, exceptions.

***The Narmada:** The Narmada originates from the Amarkantak Hill of the Maikal mountain range. It flows through a rift valley between the **Satpura** in the south and the **Vindhyan range** in the north. It forms **Dhuandhar waterfall** near Jabalpur. It travels a distance of 1312 km. It forms an estuary at its mouth. The **Sardar Sarovar Dam** has been constructed on this river.

***The Tapi:** The river Tapi originates from the Satpura range near Multai in the **Betul** district of Madhya Pradesh. It is 724 km long and flows through the states of Maharashtra, Madhya Pradesh and Gujarat. It also forms an **estuary** at its mouth.

***The Godavari:** The Godavari is the longest river in Peninsular India. It is also known as the '**Vridhha Ganga**' and '**Dakshin Ganga**'. It originates near Trimbakeshwar in the **Nashik district** of Maharashtra and discharges its water into the Bay of Bengal. *It is **1465** km long. Godavari basin extends over the states of Maharashtra, Madhya Pradesh, Chhattisgarh, Odisha, Karnataka, Puducherry, Telangana and Andhra Pradesh. It forms the delta at its mouth. Its major tributaries are the Indravati, the Pranhita, the Manjra, etc.

The Krishna: The Krishna river rises near the **Mahabaleshwar** in the **Western Ghats**. It is **1400** km long and discharges its water into the Bay of Bengal. Its major tributaries are **the Koyna, the Tungabhadra and the Bhima**, etc. Its basin covers the states of Maharashtra, Karnataka, Andhra Pradesh, and Telangana. **Krishna river water dispute** involves the states of Maharashtra, Karnataka and Andhra Pradesh (Now- Andhra Pradesh and Telangana) since 1957. A number of committees and two different tribunals (KWDT-I & II) under the chairmanship of retired judges of the Supreme Court, **R.S. Bachawat** (KWDT-I) and **Brijesh Kumar** (KWDT-II), have been constituted to adjudicate this dispute.

***The Mahanadi:** The Mahanadi rises near Sihawa (Dhamtari District) in Chhattisgarh and flows through Odisha to discharge its water into the Bay of Bengal. It forms a delta near Paradeep in the Bay of Bengal. It is **851** km long.

***The Cauvery :** The Cauvery river rises in the **Brahmagiri hills** (Talakaveri) of Kodagu district in Karnataka. It is **800** km long. It discharges its water into the Bay of Bengal near Poom Puhar (Tamil Nadu). Its drainage basin covers the states of Kerala, Karnataka, Tamil Nadu and the Union Territory of Puducherry. It forms the islands of Srirangam, Shivasamudram and Srirangapatna along its course

*Its major tributaries are **Kabini, the Bhavani, the Amravati, the Hemavati**, etc.
