

4. India is in size -

- (a) Fifth largest country in the world
- (b) Sixth largest country in the world
- (c) Seventh largest country in the world
- (d) None of the above

M.P.P.C.S. (Pre) 2010

Ans. (c)

See the explanation of the above question.

5. Area of India is 2.4% of the total area of the world but its-

- (a) population is 16% of the world population
- (b) population is 17% of the world population
- (c) population is 18% of the world population
- (d) population is 28% of the world population

39th B.P.S.C. (Pre) 1994

Ans. (b)

As per Census 2001, the area of India is 3287263 square km which is approximately 2.4% of the total land area of the world, whereas its total population is 16.7% (17.5% as per Census 2011) of the total population of the world. Hence option (b) is the closest answer.

6. How many villages are (approximately) there in India -

- (a) 5 lakh
- (b) 6 lakh 30 thousand
- (c) 8 lakh
- (d) None of these

M.P.P.C.S. (Pre) 2010

Ans. (d)

According to Census 2011, the total number of villages in India is 6,40,932. Thus option (d) is the correct answer.

7. Which of the following pair is not correctly matched?

- (a) Total area of India - 3.28 million sq. km
- (b) Latitudinal extent - 8°4' N - 37°6' N
- (c) Longitudinal extent - 68°7' E - 97°25' E
- (d) Number of states in India - 26

Jharkhand P.C.S. (Pre) 2016

Ans. (d)

The total area of India is 3.28 million sq. km. Its latitudinal extent is 8°4' N - 37°6' N and longitudinal extent is 68°7' E - 97°25' E. There are 28 states and 8 union territories in India.

8. Which of the following statements about India is incorrect?

- (a) India is the 7th largest country in the world
- (b) India is the second populous country of the world

(c) Its land boundary extends for around 15,200 km

(d) The earliest sunrise is seen in it's Mizoram State

U.P. R.O./A.R.O. (Mains) 2016

Ans. (d)

India experiences the first sunrise in Arunachal Pradesh. It is the 7th largest country in the world in terms of area and the second most populous country globally. According to the state of the World Population report, 2023 released by United Nations Population Fund (UNFPA), India is currently the world's most populous country.

ii. Latitudinal & Longitudinal Expansion

*Latitudes are the imaginary lines drawn by joining all the points having similar angular distance on the earth's surface, measured in degrees from the center of the earth. 0° latitude i.e the **equator**, divides the earth into two equal parts. The equator lies midway between the poles. All of these lines are parallel to each other and are therefore called parallels of latitudes, and on the globe are circles, becoming **smaller** polewards. *North and South poles are **90°N** and **90°S** latitudes respectively. Between these points, lines of latitudes are drawn at intervals of **1°**. There are 89 parallels in the northern hemisphere and 89 in southern. So total number of parallels, including the equator is 179 (89 + 89 + 1). North of the equator is called as the Northern Hemisphere and south of the equator is known as the Southern Hemisphere. The distance between two consecutive latitudinal lines is approximately **111 km**.
