

19. Consider the map given below –

The mean annual rainfall in the shaded parts of India varies from –

- (a) 100 to 150 cm
- (b) 150 to 200 cm
- (c) 200 to 250 cm
- (d) 250 to 300 cm

I.A.S. (Pre) 1993

Ans. (a)

The shaded part of India represents the region in which mean/average annual rainfall varies from 100 to 200 cm.

20. When there is very heavy rainfall in the Pushkar Hills, where does floods occur?

- (a) Ajmer
- (b) Sawai Madhopur
- (c) Balotra
- (d) Sojat

R.A.S./R.T.S.(Pre) 2008

Ans. (c)

Balotra, is one of the districts of Rajasthan. That is why when heavy rainfall occurs in the Pushkar hills, floods occur in the Balotra region.

21. A rainy day as defined by the Indian Meteorological Department, is a day when the rainfall at a point received is:

- (a) 0.5 mm to 1mm in 24 hours.
- (b) 1.1 mm to 1.5 mm in 24 hours.
- (c) 1.6 mm to 2mm in 24 hours.
- (d) Above 2.5mm in 24 hours.

I.A.S. (Pre) 1993

Ans. (d)

According to the India Meteorological Department, a day is defined as a rainy day when it receives rainfall of 2.5 mm or more in 24 hours.

22. Assertion (A) : The Monsoonal rainfall decreases as one goes toward the West and North –West in the Ganga plain.

Reason (R) : The moisture bearing Monsoonal winds go higher as one moves up in the Ganga plain.

In the context of the above two statements which one of the following is correct ?

- (a) Both (A) and (R) are true, and (R) is correct explanation of (A).
- (b) Both (A) and (R) are true, but (R) is not the correct explanation of (A).
- (c) (A) is true, but (R) is false.
- (d) (A) is false, but (R) is true.

I.A.S. (Pre) 1994

Ans. (a)

The monsoonal rainfall decreases as one goes towards the west and northwest in the Ganga plain. This means rainfall increases from west to east direction. In the west the plains of Punjab receive an annual rainfall of 600 mm, whereas the Gangetic plain receives annual rainfall of up to 1500 mm. In the plains of Ganga, the humidity in the air decreases gradually and therefore it tends to move upwards. The moisture of monsoonal winds affects rain.

23. Consider the map of India given below-

The map shows :

- (a) An Isohyet
- (b) All India water divide
- (c) A combination of national highways.
- (d) A combination of major highway routes.

I.A.S. (Pre) 1994

Ans. (b)

The above map shows – All India Water Divide.

24. Match list-I with list-II and select the correct answer using the given code.

List- I (Climatic condition)	List- II (Reasons)
A. Chennai is warmer than Kolkata	1. North East Monsoon
B. Snowfall in Himalayan	2. Altitude
C. Rainfall decreases from West Bengal to Punjab	3. Western depressions
D. Sutlej- Ganga plain gets some rain in winter	4. Distance from sea
	5. Latitude

Code :

	A	B	C	D
(a)	1	2	4	5
(b)	4	5	1	3
(c)	5	2	4	3
(d)	5	1	3	4

I.A.S. (Pre) 1997

Ans. (c)

The climate of Chennai is warmer than that of Kolkata due to the difference in latitudes. Snowfall occurs in the Himalayas due to a higher altitude. Rainfall decreases from West Bengal to Punjab due to the distance from the sea and Satluj (Sutlej) Ganga plain gets some rain in winter due to western depressions. Hence, option (c) is the correct answer.

25. The hallmark of watershed development in the semi-arid regions of India is the-

- Establishment of sheds on a large scale, so that the rain- water does not evaporate.
- Undertaking of earthworks, soil conservation, moisture and recharge underground water.
- Drilling deep tube well so as to tap water at the rock-strata level.
- Setting up a system of tanks by embanking water from seasonal rivers.

I.A.S. (Pre) 1994

Ans. (d)

The hallmark of watershed development in the semi-arid regions of India is setting up a system of tanks by embanking water from seasonal rivers. Today there are approximately 120,000 small tanks irrigating about 4. 12 million hectares of agricultural land in semi-arid areas of India.

26. How many districts in India are included in the desert development programme?

- 11 Districts
- 14 Districts
- 17 Districts
- 21 Districts.

R.A.S./R.T.S. (Pre) 1993

Ans. (d)

The Desert Development Programme (DDP) was started in the areas of Rajasthan, Gujarat, Haryana, Jammu& Kashmir and Himachal Pradesh in 1977-78. In 1995-96 the coverage was extended to a few more districts in Andhra Pradesh and Karnataka.

The Desert Development Programme was in operation in 131 blocks of 21 districts in 5 states up to 1994-95. But presently it covers 235 blocks of 40 districts in 7 states.

27. Consider the following statements and select the correct answer using the codes given below :

Assertion (A) : Inland waterways are not well developed in India.

Reason (R) : Most parts of India receive rainfall only for four months in a year.

Code :

- Both (A) and (R) are true, and (R) is the correct explanation of (A)
- Both (A) and (R) are true, but (R) is NOT the correct explanation of (A).
- (A) is true, but (R) is false.
- (A) is false, but (R) is true.

U.P.P.C.S. (Pre) 2008

Ans. (a)

Inland waterways are not well developed in India and one of the important reasons for that is India receives rainfall only for four months in a year. Due to less availability of water in rivers waterways are not properly developed. Hence both (A) and (R) are true and (R) is the correct explanation of (A).

28. Cherrapunji is situated :

- Naga Hills
- Garo Hills
- Khasi Hills
- Mikir Hills

Chhattisgarh P.C.S. (Pre) 2019

Ans. (c)

Cherrapunji (Now- Sohra) is situated on the Khasi hills in the state of Meghalaya.
